International Seminar «Conducting audits on cyber- and information security»

State financial control and audit in digital reality: challenges and prospects

Irina Tulyakova The Chairwoman of the Accounts Chamber of Vladimir Region

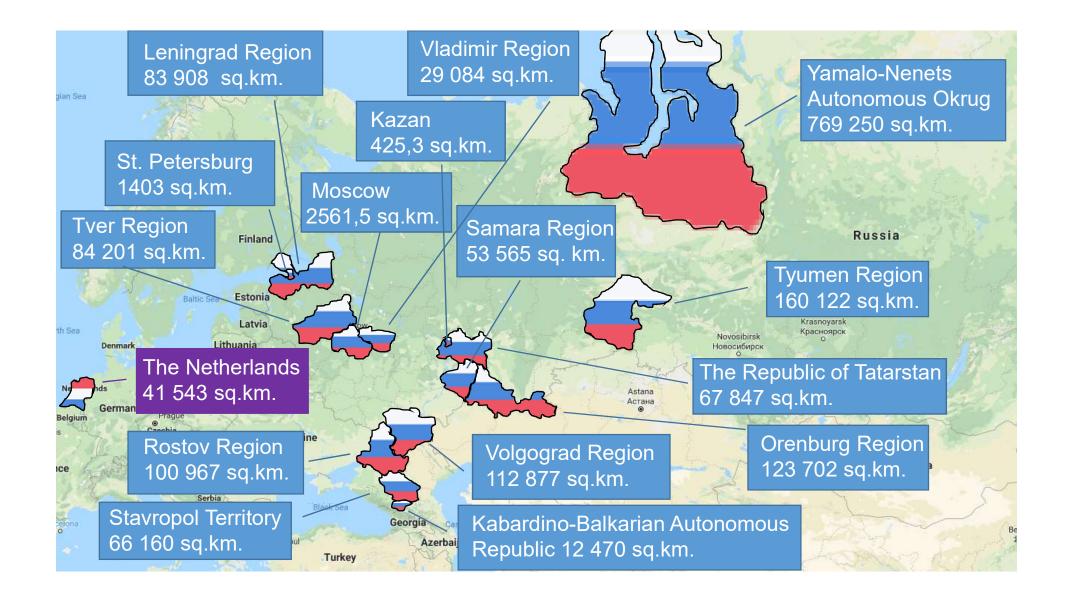

Possible effects of inefficient security of the systems and networks

- Loss and theft of computer resources, assets and funds
- Unauthorized access, release, altering, destruction of information related to the national security
- Destruction of critical infrastructure providing the national security

• Disruption of performing the inherent functions by the government institutions

- Unauthorized applications of computer resources
 - Impairing networks and equipment
 - Great expenses on restoration

St. Petersburg International Economic Forum (2017)

«In order to increase our personnel, intellectual, technological advantages in digital economics, we are going to act in the areas having the system meaning.

First, it is necessary to create quite new and <u>flexible regulatory database for</u> <u>introducing digital technologies</u> in all spheres of life. All the decisions must be made <u>in the light of providing information security</u> of the state, <u>business</u> and citizens...»

www

Vladimir Region

- investments in information and communication technologies in the sphere of state administration

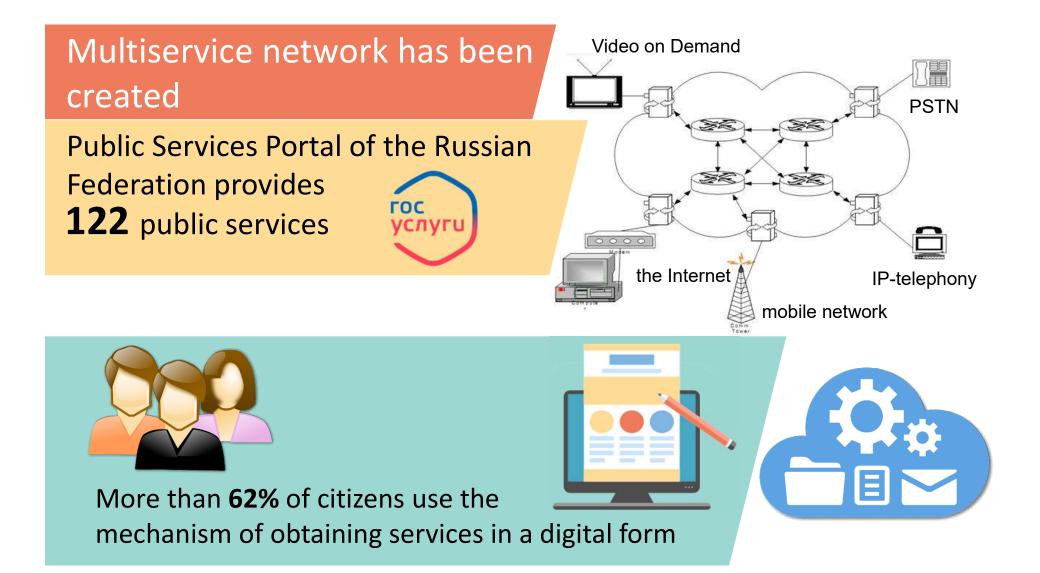

There were built more than **6 000 km** of fiber-optic communication lines including **1 500 km** in the countryside

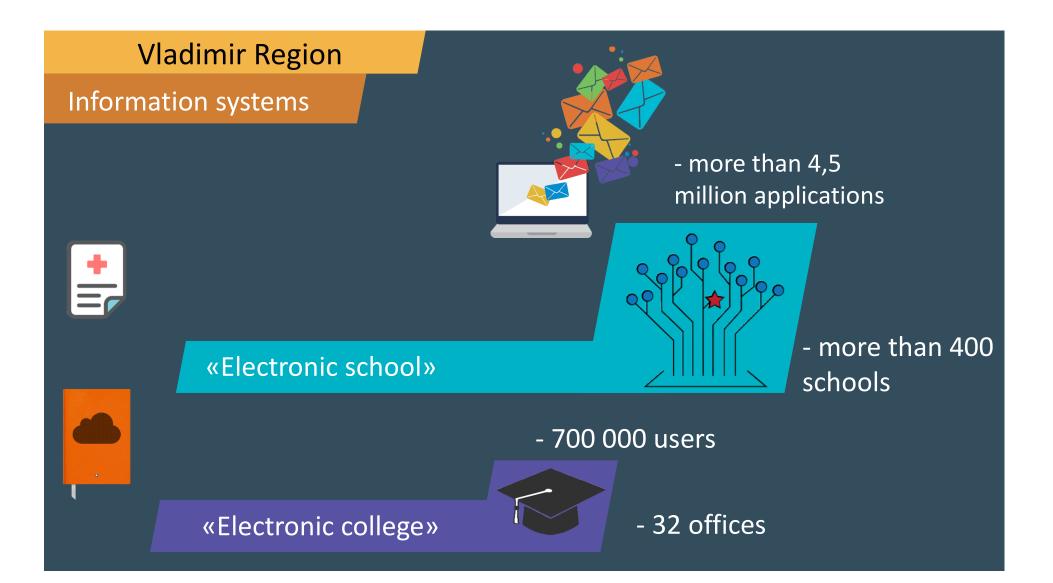

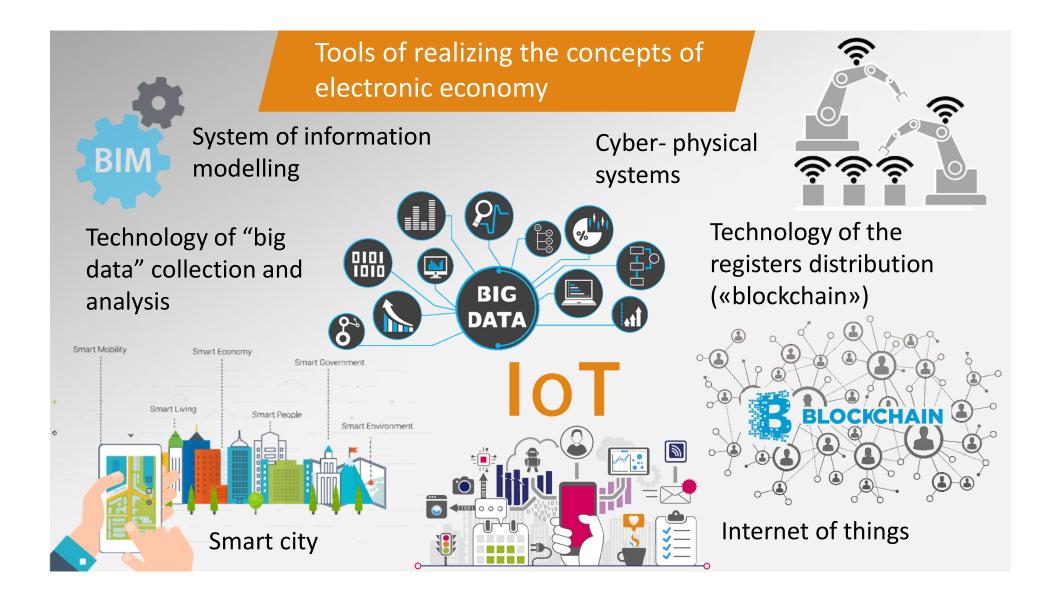

270 inhabited localities are connected to the Internet; **240** rural communities being among them

347 000 households received an access to a high-speed Internet and digital television

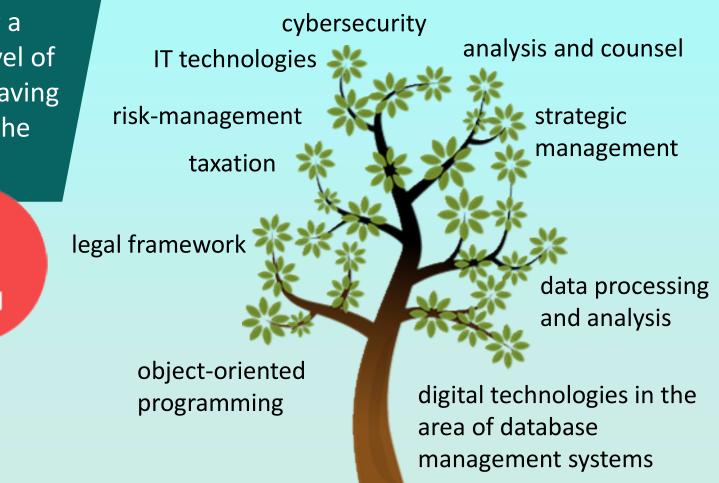

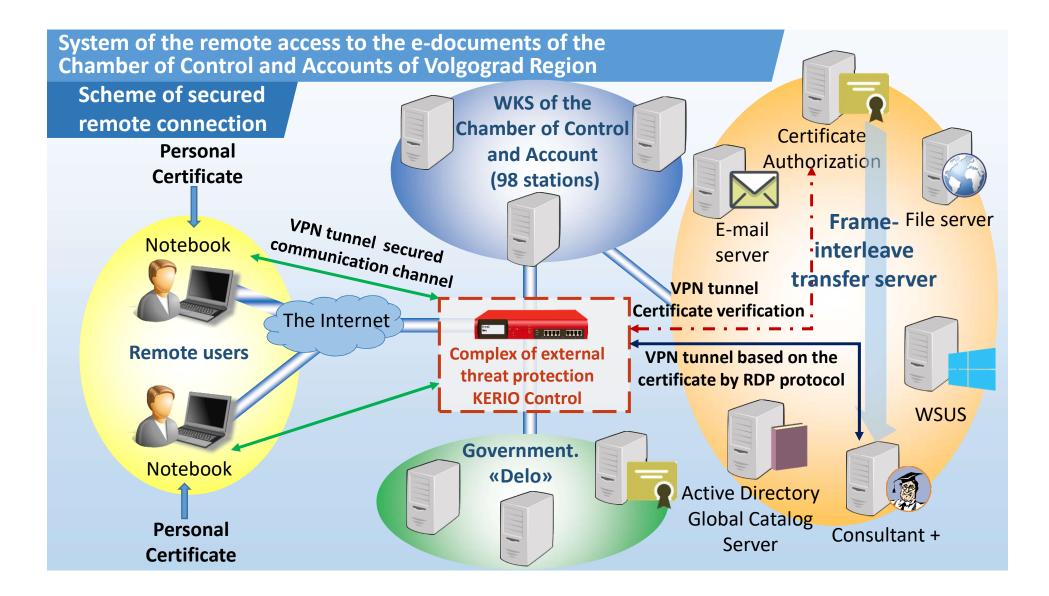

Auditor in digital economy

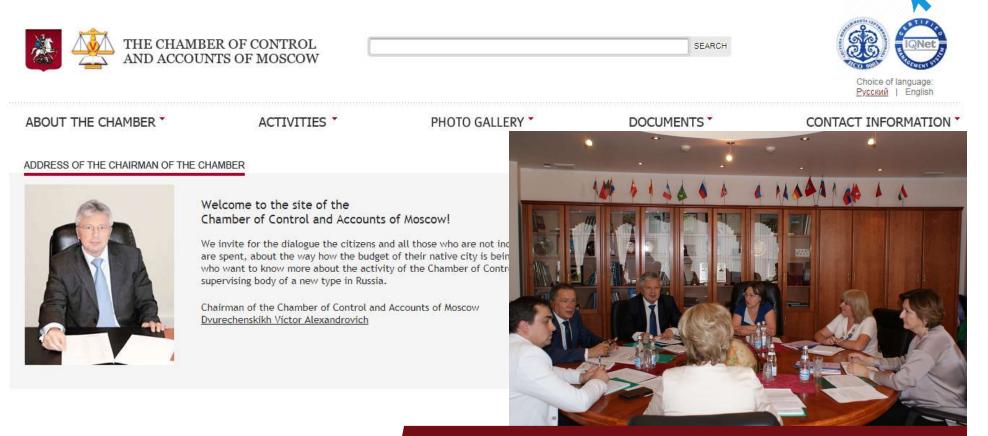

There is a need for a new qualitative level of training auditors having the knowledge in the area

The Chamber of Control and Accounts of Moscow (CCAM)

Meeting of CCAM council on the external audit

http

Measures on providing information security

Adoption of the internal document on information security and regulating the access to some certain resources

Briefing of users on the issues of meeting security demands and control over their fulfilment

Program-technical tools providing information security

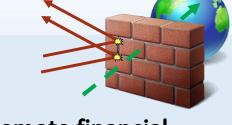

Central router with a network display

- provides interaction of the network segments
- controls interaction of the external information systems, such as

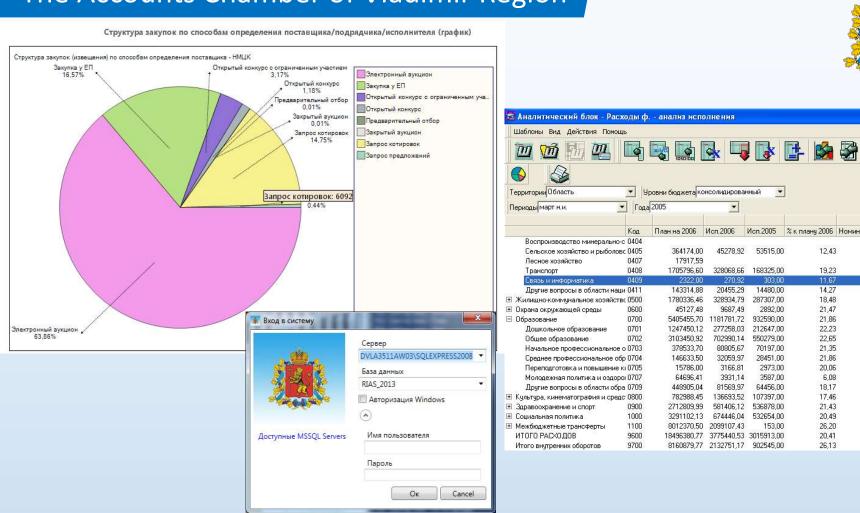

Regional information-analytical system

- independent system of the access control with a multistage security
- identification of the equipment by the address
- certificates of cyphering and authenticating
- authentication by the name and code
- cyphering communication channels

the system of remote financial document circulation of Federal Treasury and other similar systems
